$\qquad$
1.

| A | B | $\mathrm{A} \& \& \mathrm{~B}$ | $\mathrm{~A} \\| \mathrm{B}$ |
| :---: | :---: | :---: | :---: |
| T | T |  |  |
| T | F |  |  |
| F | T |  |  |
| F | F |  |  |

2. 

| A | B | ! A | !A \& \& B | $\mathrm{A} \\| \mathrm{B}$ | !(A \|| B) |
| :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |
|  |  |  |  |  |  |
|  |  |  |  |  |  |
|  |  |  |  |  |  |

Always fill in the A and B columns like I did on the first one. That's how you start these problems. (If you prefer using 1 s and 0 s over Ts and Fs, that's fine, the form is what matters.)
3. Test the variable, value, with a single if statement. If it is between 23 and 78 inclusive, print "yes".
int value $=/ *$ Code not shown sets value to a valid integer */
4. Mixing it up: make a truth table for ( $\mathrm{A} \| \mathrm{B}$ ) \&\& ! B

| A | B | $!\mathrm{A}$ | $!\mathrm{B}$ | $!\mathrm{A} \\| \mathrm{B}$ | $(!\mathrm{A} \\| \mathrm{B}) \& \&!\mathrm{B}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |
|  |  |  |  |  |  |
|  |  |  |  |  |  |
|  |  |  |  |  |  |

5. Fill out this truth table then choose the best answer below:

| A | B | $!\mathrm{B}$ | $\mathrm{A} \\|!\mathrm{B}$ | $\mathrm{A} \& \& \mathrm{~B}$ | $(\mathrm{~A} \& \& \mathrm{~B}) \\|!\mathrm{B}$ | $(\mathrm{A} \\|!\mathrm{B}) \& \&((\mathrm{~A} \& \& \mathrm{~B}) \\|!\mathrm{B})$ |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |
|  |  |  |  |  |  |  |

Which statement is true about the above truth table? (circle your choice)
a. the final column is false when A and B are the same. b. the final column is true when A and B are the same.
6. Given the following variable declarations:

```
int x = 4;
int y = -3;
int z = 4;
```

What are the results of the following relational expressions (true or false)?
$x=4$
$x=y$
$\mathrm{x}=\mathrm{z}$
y == z
$x+y>0$
$x-z!=0$
$x$ * $(y+2)>y-(y+z) * 2$
$y$ * $y<=z$
$\mathrm{y} / \mathrm{y}==1$
7. What is printed, if anything, when the following code runs?

```
int temp = 65;
if(temp>74)
    System.out.println("It is not cold.");
    System.out.println("Turn on the fan.");
```

| 8. What is wrong with this if statement? ```if cost = 5; System.out.println("the cost is 5"); }``` | 9. Assume you have two integer variables $a$ and $b$ properly initialized. Write an if statement that checks if a is greater than b and prints "yes" if so. |
| :---: | :---: |
| 10. What is printed when the following code runs? ```int a = 7; int b = 9; if(a>b) System.out.println("A"); System.out.println("B"); if(b==a) System.out.println("C"); System.out.println("D"); if(a!=b) { System.out.println("E"); System.out.println("F"); }``` | 11. What is printed when the following code runs? ```int score = 93; if (score >= 90) grade = "A"; if (score >= 80) grade = "B"; if (score >= 70) grade = "C"; if (score >= 60) grade = "D"; System.out.println(grade);``` |
