

Day1 assignment, August 11, 2022

Before attempting this assignment, be sure to have logged in to your school gmail account, and then also repl.com.

If you missed class, here is the short version: on your computer, log in to your school Google account. Then open a new tab and visit <https://replit.com/> . Create a new Java repl. Then modify the code as requested below.

Your task for today: using 5 lines of code print something similar to the following (you must include your name, and you must print only two lines).

```
Hello. My name is <your name>. Nice to meet you.  
This is going to be a great year!
```

Only 2 of your lines of code can be println, the other 3 must be print calls.

To turn in your project, click the Invite button, get a join link, and turn the link in on the Google Classroom. If you are not clear how to do this, watch the attached video.
