Day2, due Friday 8/13/21

Log in to your school Gmail, then open a tab and log in to repl.

Create a new repl, this one named "Day2" that is using Java.

Add a comment at the top with your name in it.

In your project use two print lines to print the following:

```
When you say "jump" I say "how far?"
In one print call
      I have done
          this cascading series
                of lines.
```

One print line prints the first line about jumping, the other print line prints the rest.

Use this as a checklist:

- You created a repl project named Day2.
- You put your name in the top in a comment.
- You have inside your program two print calls. One prints the line about jumping, the other prints the other four lines using escape characters.

When you are done turn in a share link on the Google Classroom. Let me know if you have any questions.
