

Day34 Voter Class

Write a class called Voter with the following variables and methods:

Variables:

String firstName

String lastName

int ID (a unique integer id number, starting at 1000; goes up by 1 with each new Voter created)

There may be other variables that are not mentioned here.

Constructor:

Takes the first name and last name as arguments, in that order and sets the Voter to the next appropriate ID, as noted above.

Methods:

int getID() (returns a voter's ID)

String toString() (returns a string that looks like this: "lastName, firstName, ID")

Add tests to the Main method to create and print 3 Voter objects. Print them as you create them, then print the first Voter again to make sure it still has its original ID. Also use the .getID() method once.
