day28 ABAB Due Monday 10/18/21

Write a program that prints the numbers from 31 to 132 using a for loop. But for multiples of seven print "A" instead of the number and for the multiples of six print "B". For numbers which are multiples of both seven and six print "AB".

In Python when you want to do an if statement with two parts, you can use the keyword "and" like this:

if x % 7 == 0 and x % 6 == 0:

You will need this to get your program done.

Requirements:

- Put your name in a comment at the top of your program for good measure.
- Name your program day28.
- You must go through all of the numbers from 31 to 132 inclusive using a for loop.
- Print a tab between each number (that's "\t" if you didn't remember.)
- You will use the % command and one or more if/elif/else statements.
- Print out the information in six columns as shown below.

Sample output:

31	32	33	34	A	В
37	38	39	40	41	AB
43	44	45	46	47	В
A	50	51	52	53	В
55	A	57	58	59	В
61	62	A	64	65	В
67	68	69	А	71	В
73	74	75	76	A	В
79	80	81	82	83	AB
85	86	87	88	89	В
A	92	93	94	95	В
97	A	99	100	101	В
103	104	А	106	107	В
109	110	111	А	113	В
115	116	117	118	A	В
121	122	123	124	125	AB
127	128	129	130	131	В
	37 43 A 55 61 67 73 79 85 A 97 103 109 115 121	37 38 43 44 A 50 55 A 61 62 67 68 73 74 79 80 85 86 A 92 97 A 103 104 109 110 115 116 121 122	37 38 39 43 44 45 A 50 51 55 A 57 61 62 A 67 68 69 73 74 75 79 80 81 85 86 87 A 92 93 97 A 99 103 104 A 109 110 111 115 116 117 121 122 123	37 38 39 40 43 44 45 46 A 50 51 52 55 A 57 58 61 62 A 64 67 68 69 A 73 74 75 76 79 80 81 82 85 86 87 88 A 92 93 94 97 A 99 100 103 104 A 106 109 110 111 A 115 116 117 118 121 122 123 124	$\begin{array}{cccccccccccccccccccccccccccccccccccc$
