

Tinkercad Concert or Apartment

Due Tuesday 5/17/22 (4th period) Wednesday 5/18/22 (5th period)

Today you have a choice:

1. In Tinkercad design a musical concert scene, with a stage, a band, and an audience. Perhaps include instruments, lights, speakers, performers and other interesting concert related elements. Definitely include a crowd of people watching the show. (You may use elements from the Creatures and Characters subgroup of objects to get people).
2. In Tinkercad create an apartment building model that is four or more stories tall with at least four apartments per floor. On one of the upper floors, make the insides of one of the apartments visible (the other ones can all be boxes with windows on them with nothing actually inside of them.) The one “open” apartment needs to have at least two people in it, with furniture, a window on the back wall, and other interesting objects inside.

Do one or the other.

Whichever option you choose, turn in a **share link** today to receive full credit. Do not turn in an STL file, this assignment requires a Tinkercad share link.
