

Make a chair
Group project

Your task is to design and build a functioning chair out of cardboard that will hold a typical person's weight.

There are three stages to this task:

1. Brainstorm ideas. With your group, make sketches, write down ideas in your Maker notebook.
2. Build a small scale version of your project out of cardboard. The model must be less than 8 inches in all directions.
2. Build a full size chair out of cardboard that can hold the weight of each person on your team (one at a time, of course).

Today: get your Maker notebooks, make a team of two to three people, and start working.
