

Tinkercad Key

Make 1

Due: Tuesday 11/2, 4th period

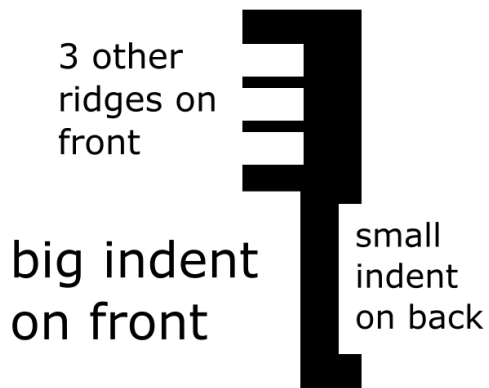

Wednesday 11/3, 5th period

Make a key in Tinkercad. It needs to have the following attributes:

- A lower indented area with various ridges, see example to the right.
- Three indents above the lower area that run all the way across the key
- A non-rectangular far right side (see the far right side of the key image above and how the far right side is not a straight vertical line?)
- Your name as the brand name of the key (instead of "SCHLAGE")
- A hole for the keychain ring
- At least one indent on the back side of the key

Here is an end view (looking at the far right pointy end of the key). This is just for you info, this is not what I'm asking you to make. I'm asking you to make a key. This is just what the end would look like when you turn the key to point towards your face.

Turn in a share link when you are done
