

Tinkercad: Holiday Food Project Make/Make 2

In Tinkercad, make a Thanksgiving holiday food item in Tinkercad, anything you and your family might eat or once at over Thanksgiving. Some ideas include:

- Pie
- Turkey
- Stuffing
- Mashed potatoes
- Roasted vegetables

You can make something else that you might eat at the holidays if you wish. These are just some ideas I'm throwing out there. The creation must have at least 25 pieces that make up the whole creation (hole parts count, too).

The creation must have different colors.

It has to be entirely made of basic shapes (meaning, don't go digging around in Tinkercad and finding food items to use that are pre-made). It's OK if what you make it clunky, it just has to clearly be the food item that you are trying to represent.

This is due today. Make 2 students who are working actively on their chair projects can be excused from this, please just check in with me.
