

West County World, Student Newspaper Rack

Our school newspaper has a rack to help distribute papers. The rack is normally outside the main office in the main building.

Today (Thursday 2/3 and Friday 2/4) it is in the Maker Lab.

Your task is to design a good looking sign that we could laser cut out of wood and mount onto this rack.

Your design needs to have two parts:

- 1) An Inkscape file that is sized correctly, that contains the West County World logo, and which could be laser cut if your design is chosen to be the official design that we'll be attaching to the rack.
- 2) A plan to attach the sign to the rack. You will explain what your plan is in detail using a Google Form.

Attached to this assignment are the logo as an image file (import it into Inkscape, you must use this in your design) and the Google Form where you will tell me how your sign will be mounted to the rack if your design is chosen.

Use a tape measure to measure the actual size of the rack and design a sign that will actually work with this specific rack.

Any questions? Talk to me.

This is due today.
