

Scratch 15 - scrolling background
Due Friday April 23, 2021 by midnight

Check out this video where a Scratch volunteer shows how to make a background scroll past in a Scratch project:

<https://www.youtube.com/watch?v=CvSOVWyyjJI>

Your task today is to do this from a blank empty project:

1. Draw a two color (or more background) as demonstrated in the video with at least one thing in the background (like the rock she demonstrated).
2. Watch the video, follow along, and make your project have a scrolling background. Since you're doing it the way she showed us, you will end up with two sprites making up the actual background. Make one of them different from the other.

That's it! Turn in a share link when you are done.

If you need help, watch her video again. Pause it. She's very clear on how to do this. Good luck!
