

Analy Shape Design Activity

Make 1 and Make 2

Due 3rd & 4th period, Monday 12/14/20 by 5pm
7th periods, Tuesday 12/15/20 by 5pm

Using only the given shapes (square, equilateral triangle, circle) in either blue, black or white or a mix of these colors, create an Analy spirit poster that celebrates part of what you believe makes Analy great. You may duplicate or rotate the shapes as much as you want, but do not union or resize them. They may partially cover each other, but they must remain exactly what they were at the start in terms of size, border, color and dimensions. A copy of the shapes is to the right so you can see what we're working with.

Click [here](#) to open a Gravit file with these items in it. This is where you will start. Once you have the file open, under the File menu choose "Save to cloud as..." and save it as "Shape Design <your name>".

What should you create? It's up to you: you can spell a word that to you Analy stands for or should stand for, draw a tiger, a paw print, or any other design that you can think of that relates to Analy and what makes Analy great. To get full credit your creation must be clear to an outside observer (meaning: if I can't see what you think you've created, I'm not going to give you full credit.)

Checklist before turning in project:

1. Your design celebrates part of what you think makes Analy great.
2. Your design is made up entirely of copies of the shapes I gave you in the template.
3. You can rotate and duplicate the shapes all you want, but do not resize them.
4. Extra shapes are deleted when you are done.
5. Your creation looks great!
6. Add text at the bottom, separate from your design (not overlapping) saying what you were trying to do with this poster (in other words, explain your design to me.)
7. Make sure your everything fits on the page.
8. Your project is named "Shape Design <yourname>" and is turned in on the Google classroom.
