Tinkercad: Make a Meal
Project Make/Make 2

In Tinkercad, make a food item, your choice between the following:

- Taco
- Sandwich
- Hamburger
- Plate of pasta
- Something else you think would be fun to make

The creation must have at least 10 pieces that make up the whole unit (hole pieces count, too).

The creation must have different colors.

It has to be entirely made of basic shapes (meaning, don't go digging around in Tinkercad and finding food items to use that are pre-made). It's OK if what you make it clunky, it just has to clearly be the food item that you are trying to represent.

Here is a sample taco I made:

(Don't ask me what the blue things are, but I'm sure they are tasty.)
