

Design a new main school building

Project Make/Make 2

Due: 4th period: Monday 4/17/21 by midnight

3rd & 7th periods: Tuesday 4/18/21 by midnight

Our school board, as part of the Analy/El Molino consolidation plan, has said that in the coming years it hopes to build a new large building on the Analy campus to contain several new and modern classrooms.

Your task today is to create an ideal model of this new school building.

Requirements:

- The building features at least 16 classrooms in a single building (as evidenced by windows)
- The building may be 1 or 2 stories tall
- Please make the area surrounding the building green to simulate grass
- Add trees or shrubs, as well as walkways
- Add other interesting features (2 or more) of your own choosing (leave me a private comment on the assignment in the Google Classroom saying what your two extra features are.)
