day59 Scratch scrolling background, program 1 of 2 for today
Due Friday 2/9/24

Check out this video where a Scratch volunteer shows how to make a background scroll past in a Scratch project:

https://www.youtube.com/watch?v=CvSOVWyyjJI

Your task today is to do this from a blank empty project:

1. Draw a two color (or more) background as demonstrated in the video with at least one thing in the background (like the rock she demonstrated).

2. Watch the video, follow along, and make your project have a scrolling background. Since you're doing it the way she showed us, you will end up with two sprites making up the actual background. Make one of them different from the other.

3. Add a Sprite that "walks", make it look like it's walking even though it's staying in one place while the background scrolls by.

That's it! Call me over to see your project before you turn in a share link.

If you need help, watch her video again. Pause it. She's very clear on how to do this. Good luck!

There is a second program for today… so after you finish this, get started on that.
