

day63 Scratch Valentine

Due Monday 2/6/23

Valentine's day is this coming Tuesday (we have a school holiday next Monday.)

Your task today is to create an animated Valentine's Day card for someone. You need a sequence of events that occur when the green flag is clicked that tell a short story, act out a scene between a few sprites, or somehow express something related to love, gratitude, or friendship. The whole thing must be pleasing to look at and be school appropriate.

Notes:

- Your project is named Valentine
- The story resets and starts over when you press the green flag.
- Your program has two or more backgrounds.
- Your program tells a story or shows a sequence of action that is at least 10 seconds long.
- The story is about friendship, love, gratitude, or Valentine's Day.
- Keep everything appropriate for the school context.
- Somewhere the program has a heart in it.
- Somewhere your program says "Happy Valentine's Day!"
- Feel free to add/use sounds to enhance the experience.

Call me over to check you off when you are done. Also turn in a share link.

If you want to send this to someone for Valentine's Day, there is a share button in Scratch, you can then copy a link and email the link to someone who can open it and play it even if they do not know how to program in Scratch (You'd want to tell them to click the green flag, otherwise they might not know how to make it run.)
