

Inkscape Letter Play (Make 1 only)

Due: Tuesday (4th and 6th periods), Wednesday (3rd period)

For this assignment you will create some images using one or more of your initials.

First, open a new Inkscape document

Part 1:

1. Using the text tool, type your first and last initial as capital letters. Select the text and change the font to something more fun than the default.
2. Enlarge your initials so they are a few inches across.
3. Duplicate then, then flip the copy vertically.
4. Drag the flipped version below the original version. Make them overlap a little bit. Select them both and choose Path>Union.
5. Turn off fill, turn on the stroke. It should look something like the image here, except be your initials, not mine.

Part 2:

6. Draw a circle using the control key so that it's a perfect circle. Make it a couple of inches across.
7. Use the text tool to write just one of your initials. It can be for you first name or your last name. Again, change the font to something non-default. Use the control key to make the letter larger.
8. Move the letter so it's over the circle like this to the right.
9. Select the letter and circle and choose Path>Difference. You'll end up with something like this:

(continued on next page)

If the wrong parts of the letter disappear, watch this video for how to make it work:

<https://youtu.be/Yjv5icCME58>

10. Draw a new circle that surrounds your letter/circle object. Center and alignn vertically and horizontall. Choose "Path>Combine".

If your letter is very round, you could use a square if you want. If you did that, you might end up with something like this:

11. Turn off fill and turn on border for the object. Arrange your two objects next to each other neatly like this:

Make sure your Inkscape file is named with your name and "letter play".

That's it. Save your project. Turn in the Inkscape file on the Google Classroom.
