

Project Make 1

Instructables search and report

Due Tuesday 1/23, Wednesday 1/24

Go to this site: <https://www.instructables.com/projects/>

Instructables has thousands of projects in various categories, from crafts, to laser cutting, electronics, woodworking, and beyond. It's full of amazing ideas.

Your task is to spend some time digging around on this side to find a project that you think would be fun to do. You can search for a type of project using their search button (I tried "sewing", "bamboo", "laser cut", and "Arduino" individually, for example, and found a ton of fun projects.)

Read through several different projects before choosing one. Find a project that would require you to learn one or more new skills, but that was within the range of the possible if you had the time and a reasonable budget.

After you choose a project, read through the instructions on the website and identify what materials and/or tools you would need to actually do the project.

Go to the Google Classroom and click the link for the Google Form for this project. Enter the requested information (Project title, Link/URL to the project, list of parts/tools you would need to, estimated time, and new skills required.)

Fill out and submit the form and you're done.
