

Inkscape fish  
Due Monday 4/29/24

Put your name inside of a fish using envelope deformation (what we learned in the Inkscape psychedelic letters assignment from last week).

Your end result will be something like this:

You choose the fish type. I recommend searching using "silhouette" to get a solid black fish to use for trace bitmap.

Your name must mostly fill the fish. In other words, the following image would not get you credit because sure, the text is warped, but not very much and not to the edges.

Finally, your name must be in a bright color. Turn in on the Google Classroom when you are done.

If you need help, I've got a video where I do the puffer fish [here](#).
