

Class gear project
Due Monday 5/22/23

As you may have noticed around the Maker Lab, each year we create a group project that includes everyone from all of our Make classes in a single creation.

This year everyone is making a gear and we'll be putting the gears up on a big board.

The assignment:

1. Start with the gear template (attached to this assignment in the Google Classroom).
2. Decorate the gear according to your personality. You must include an image and you must include your name.

All decorations must be black. Fill is great. Images must be greyscale or black (in other words, no color images.) It would be best if you do a trace bitmap on any image.

3. Save your Inkscape file with your name in the title and email it to the laser cutter when you are done. Don't forget to also turn it in on the Google Classroom for this assignment.
4. Once it is cut out, and the board is ready, you will attach your gear appropriately to the gear project board.
