

Soap dish

In the back of the classroom we have a sink. I keep a bar of soap there so we can wash our hands when necessary. We need a soap dish or tray to keep the soap off the bottom of the sink.

Design a soap holder of some kind. It can be laser cut, 3D printed, or made by hand using materials we have available to us. It must be able to hold the soap up off the bottom of the sink base.

Design it, build it, and show it to me. The best one will be used.
