

Last Fall Sticker
Due today

Your task: make a sticker that is 9 square inches in size or smaller. You decide your dimensions (anywhere from 1 by 9 inches, to 2 by 4.5 inches, to 3 by 3 inches; the length and width must multiply to 9 or less.)

The sticker must be weedable; part of your grade is that you actually weed it well and that it turns out well. Remember, lots of small text is very hard to successfully weed.

Any text must be turned into a path before you send your file over to the vinyl cutter.

Checklist:

- Paths are .1 mm
- Any images you got from the Internet have been Trace-bitmapped
- All fill is turned off
- Any text has been turned into a path (Path menu>Object to Path)

After we cut out the sticker on the vinyl cutter, weed the parts off that you don't want and then apply transfer tape.

Show the sticker to Mr. Hays **BEFORE YOU PUT IT ON ANYTHING** to get credit. Part of your grade is that you are able to prepare the sticker well and use transfer tape.

Turn in your Inkscape file on the Google Classroom after you send it to the vinyl cutter.

Final sticker is due today.
